

Embossing Powder and Fusible Webbing
Maude
rainbowartcards@msn.com

white or light colored cardstock
Wonder Under or some kind of fusible webbing
various colors of embossing powder

This technique is from a Suze Weinberg book. Cut a piece of fusible webbing just slightly smaller than your card front. Apply the webbing to the card front and heat just slightly until the webbing begins to adhere to the front. Take various colors of embossing powders and sprinkle over the card front. Heating to melt the embossing powder will also cause the fusible webbing to melt. This creates interesting textures over the card front.
